Wildlife in India

India, a mega diverse country with only 2.4% of the world's land area, accounts for 7-8% of all recorded species, including over 45,000 species of plants and 91,000 species of animals. Therefore, to preserve this biodiversity in India, the following areas have been identified, and they have been divided according to their nature.

1. Biosphere Reserve

Biosphere reserves are sizable, biodiverse areas that are safeguarded for their flora and fauna. These environmental protection zones mainly correlate to the IUCN Category-V Protected areas.

- **Objective** – Natural Vegetation & Conservation of animals.
- It is established under the UNESCO 'Man & Biosphere programme' in 1971. The World Network of Biosphere Reserves currently count 738 sites in 134 countries all over the world, including 22 transboundary sites.

- Present time in India is 18 Biosphere Reserve. (RRB NTPC 2021) (SSC MTS 2023)
- 12 biosphere reserves of India have been recognized under the UNESCO Man and Biosphere reserve program. The level of restriction in the increasing order is- **Biosphere Reserves < Wildlife Sanctuaries < National Parks**

types of energy sector in India-

1. Non-Renewable / Conventional
2. Renewable / Non-Conventional

➤ Non-Renewable/ Conventional Energy Sector

Non-renewable energy is a source of energy that will eventually run out or depleted. non-renewable energy are fossil fuels, such as coal, gas, oil.

Non-renewable energy sources

➤ Thermal Power Plant:

Thermal power plants generate electricity by using non-renewable fuel like coal, petroleum, natural gas Nuclear fuel (Uranium and Thorium). The heat released by smouldering of fuel builds up steam in the boiler. The steam is then utilized to run a turbine affixed with the generator.

➤ National Thermal Power Corporation

Function- generation and distribution of electricity to State Electricity Boards in India, India's largest power utility with an installed capacity of 73,824 MW (including JVs), plans to become a 130 GW company by 2032. Established in 1975, works under Ministry of Power.

In India, large portion of electricity produced—roughly 75% of the total is produced using coal-fired thermal power plants. (RRB NTPC 2021)

They used Coal as fuel for the power production. Generally Lignite is used in thermal power plant since it is of lower grade and contains less percentage of carbon.

➤ Nuclear Power Plant:

- The GOI passed the Atomic Energy Act in 1948, leading to establishment of the Indian Atomic Energy Commission (IAEC) situated at Mumbai (RRB NTPC 2021)

- The atomic energy act of 1962 prohibits private control of nuclear power generation. (RRB NTPC 2021)

- The first formal demand for the development of nuclear weapons was made in parliament in December 1962, after Indo-China war, in 1962.

- The father of Indian nuclear program was Dr. Homi Bhabha (SSC CHSL 2023) founded India's three-stage Nuclear power program. He was an Indian nuclear physicist, founding director and professor of physics at Tata institute of fundamental research (TIFR). (SSC CHSL 2023) after Indian independence, Indian prime minister Jawaharlal Nehru authorized the development of nuclear program headed by Homi J. Bhabha. (RRB NTPC 2021)

- After the Chinese nuclear test on 16th October 1964, Shastri maintained his opposition to Indian Nuclear Program. While Bhabha argued that "atomic weapons give a state possessing them in adequate numbers a deterrent power against attack from a much stronger state".

- In April 1965, Shastri gave Bhabha, the needed formal approval to move ahead with nuclear explosive development. On 5th April 1965, Bhabha initiated the effort by setting up the nuclear explosive design group Study of Nuclear Explosions for Peaceful Purposes (SNEPP).

- Bhabha selected Raja Ramanna - Director of Physics at Atomic Energy Establishment, Trombay (AEET) - to lead the effort.

- The program, later, revived in 1967 under leadership of PM Indira Gandhi & continued uninterrupted until it culminated in a successful nuclear test less than seven years later.

- Under Prime minister office Department of Atomic Energy, established in August 1954.

➤ Types of Reactor

Reactor	Description
Light-water reactors (LWR)	power reactors that are cooled and moderated with ordinary water. two types: the pressurized-water reactor (PWR) and the boiling-water reactor (BWR).
Pressurized-water reactor	• These reactors pump water into the reactor

(PWR)

core under high pressure to prevent the water from boiling.

- ♦ The water in the core is heated by nuclear fission & then pumped into tubes inside a heat exchanger.
- ♦ Those tubes heat a separate water source to create steam.
- ♦ The steam then turns an electric generator to produce electricity.

Boiling-water reactor (BWR)

- ♦ BWRs heat water and produce steam directly inside the reactor vessel.
- ♦ Water is pumped up through the reactor core and heated by fission. Pipes then feed the steam directly to a turbine to produce electricity.

Pressurized heavy water Reactor

- ♦ It uses an enriched Uranium as its fuel while Heavy water serves as coolant and neutron moderator.
- ♦ The heavy water is kept under high pressure, allowing it to be heated to higher temperatures without boiling.
- ♦ The first pressurised Heavy Water Reactor (PHWR) of India was a collaborative venture between Atomic energy in Canada and NPCIL of India. (RRB NTPC 2021)

Sodium Cooled fast reactor

- ♦ These reactors are cooled by liquid sodium metal.
- ♦ Sodium is heavier than hydrogen, that leads to the neutrons moving around at higher speeds.
- ♦ These can use metal or oxide fuel, and burn a wide variety of fuels.

Fast reactor	Fast reactors are a class of advanced nuclear reactors that have some key advantages over traditional reactors in safety, sustainability, and waste.

Indian Security System

The objective of the Indian security system is to provide security to our country India from internal and external security challenges and To maintain the unity, integrity and sovereignty of India.

- There are two types of security challenges before the Indian security system –
(1) Ensuring internal security
(2) Ensuring external security
- It is the task of the **Ministry of Home Affairs** to ensure the internal security of the country.
- The responsibility of the **Ministry of Defence** is to protect the country from external threats.

The first Defence Minister of independent India was Baldev Singh and the first Home Minister of India was Sardar Vallabhbhai Patel (SARDAR - This name was given to him during the Bardoli Satyagraha (1928))

- To deal with India's internal and external security challenges, the **Paramilitary forces** and **CAPF** is working under the Ministry of Home Affairs respectively, while all the **three parts of the Military/Armed forces** (Army , Navy and air force) are working under the Ministry of Defence to deal with the external security.

1. India's defence system to protect India from external challenges (INDIAN ARMED FORCES)

- Protecting India's sovereignty, unity, integrity along with India's terrestrial, aquatic and air border is the work of the Armed forces under the Ministry of Defence.
- The total length of India's terrestrial international border is 15,200 km, while the total length of its maritime border is 7515 km, thus India is the country with the third largest international border in the world after China and Russia.
- The Indian Armed forces is currently divided into three parts, which we know as follows :
 - Army** - It is further divided into 7 Command
 - Air Force** - It is divided into 7 Command
 - Navy** - It is divided into 3 Command
